An Alternative to LASIK Surgery **Acrysof Cachet**

ACRYSOF[®]
CACHET[™]

The Acrysof Cachet, the phakic IOL manufactured by Alcon Laboratories, USA, is a long awaited product that reverses myopia or near-sightedness for eyes with grades exceeding $-6.00D$, where Laser In Situ Keratomileusis (LASIK) may not be the best option. The phakic IOL is implanted by slipping the soft, foldable, material into the eye through a small slit in a painless 10 minute procedure under topical anesthesia on an out patient basis. Phakic IOL implantation has been under development for more than 20 years. The Acrysof Cachet has been under study for the past 10 years showing unprecedented safety and predictability. Unlike LASIK, Phakic IOL Implantation does not distort the corneal surface or cause regression. If your grade is more than $-6.00D$, this lens may be the solution you've been waiting for.

Consultation Hours: 8:00am - 6:00pm, Monday - Saturday

G/F Belson House, 271 EDSA (near Connecticut St.), Mandaluyong City

Call for an appointment: Tel: 7217135 / 7216412
